Summary

Frontend Developer with 4 years of experience building scalable, responsive web and mobile applications using JavaScript, React, and React Native. Proven ability in leading frontend development from requirement analysis through delivery, developing real-time collaborative features with WebSockets (Socket.IO), and building reusable, high-performance UI components. Experienced in working closely with cross-functional teams, driving code quality through reviews and best practices

Education

B.TECH in Computer Science Engineering

2018-2022

Board : APJ Abdul Kalam Technological University

Skills

- **Languages:** HTML, CSS, JavaScript, TypeScript
- **Frameworks and Libraries:** React, React Native, Next.js, React Testing Library, Formik, Redux, Redux Toolkit, Tailwind CSS, Webpack, AG Grid, react-i18next
- **APIs and Integrations:** REST APIs, WebSocket (Socket.IO), RTK Query, Axios
- **Tools and Platforms:** Git, Docker, Google Cloud Platform, SonarQube, Cursor, Copilot
- **Additional Technologies:** Node.js, NestJS, Express.js, PostgreSQL, MongoDB
- **Development Practices:** Component-Based Architecture, Responsive Design, State Management, API Integration, Performance Optimization, Debugging & Bug Fixing, Agile Methodologies, Role-Based Access Control (RBAC), Semantic HTML

Professional Experience

Senior Engineer, Qburst – Kochi, India

Jul 2022 – Ongoing

project: FinTech Platform

- Led frontend development from requirement analysis to delivery, Supervising cross-team knowledge transfer and code reviews
- Designed and implemented real time data synchronization using websocket (Socket.IO), enabling multi-user collaboration with Role-Based Access Control
- Developed reusable components and optimized performance, including state management across multi-tab interfaces
- Integrated and customized AG Grid library with React for large scale data handling, real-time updates, and customer theme matching
- Managed and delivered 30+ Change Requests aligning with stakeholders and integrated them within planned release cycles
- Resolved 160+ QA-reported defects and suggestions within milestone timeline, ensuring on-time delivery across multiple releases
- Collaborated closely with backend teams to define workflows, Supported QA with test case executions, Led client demos for milestone deliveries, and ensured efficient development within tight project timeline

project: Agile Estimation Platform

- Designed real-time voting workflows, implemented websocket (Socket.IO) integration
- Converted complex UI designs (honeycomb layout) into responsive react components across screen sizes 1240px (laptop) to 420px(mobile)
- Managed data propagation between different components using state management libray (Redux)
- Integrated SonarQube and ESLint into development pipeline, improving code quality and maintainability
- Conducted code reviews and performance optimizations to enhance the user experience and meet semantic HTML5 standards

project: Fashion Retail Platform

- Enhanced search experience by developing a cascading filter system that dynamically displays only valid filter options based on previously selected filters and available products
- Revamped the Recommended Products, Filters, and other UI components to improve responsiveness in small screen sizes
- Resolved UI, functional, and internationalization (i18n) issues, including language translation defects using React i18next,

improving localization accuracy and multilingual user experience

Projects

Microfrontend in React

gitlab.com/pynadathanonyg

- **Tech Stack:** Webpack, React
- **Summary:** The aim of the project was solely to understand how to implement microfrontend architecture in real world scenarios. The codebase consist of React and Vue sub projects which are combined together inside a Container project with the help of ModuleFederationPLugin provided by webpack. The project helped to understand the configurations of webpack and the different ways to use these configurations to achieve a scalable and efficient microfrontend architecture.

Certificates

• Google Associate Cloud Engineer
